## Hourly Wangiri/SPAM check

This is a hourly basis check for Wangiri fraud. Wangiri fraud, also known as the Wangiri scam or one-ring scam, is a type of telephone fraud where scammers trick individuals into calling back high rate destination numbers, resulting in charges to the victim. Below is the script used to check suspicious numbers and the respective steps for the analysis.

## **Script:**

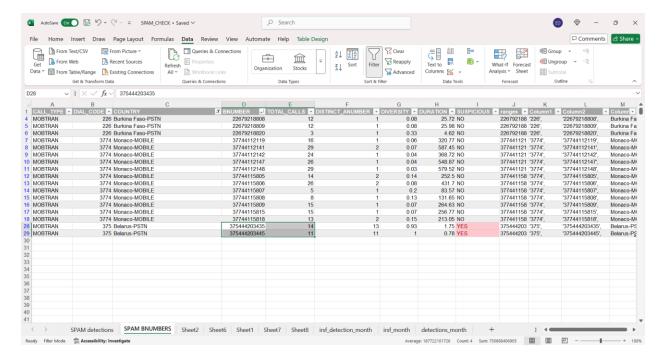

```
****************
SELECT TRUNC (A.DETECTION DATE) DATE DETECTION, A.*
 FROM TBL ED SPAM DETECTION A
WHERE A.DETECTION DATE >= TRUNC (TRUNC (SYSDATE, 'MM') - 1, 'MM')
      AND A.DETECTION DATE < TRUNC (SYSDATE, 'MM') ORDER BY 1 ASC;
 SELECT *
   FROM ( SELECT call type,
                 msisdn dial code,
                 country,
                 TRANSLATED NUMBER bnumber,
                 COUNT (date code) total calls,
                 COUNT (DISTINCT anumber) distinct anumber,
                 ROUND (COUNT (DISTINCT anumber) / COUNT (date code), 2)
                    diversity,
                 ROUND (SUM (CHARGEABLEDURATION / 60), 2) duration
             FROM ( SELECT date code,
                           TO DATE (date code || time code,
'yyyymmddhh24miss')
                             DATE OF CHARGE,
                           call type,
                           -- INCOMING TKGP,
                           OUTGOINGROUTE,
                           callingpartynumber anumber,
                           -- bnumber,
                           TRANSLATED NUMBER,
                           ORIGINATINGLOCATIONNUMBER,
                           CHARGEABLEDURATION,
                           CHARGEABLEDURATION / 60 DUR MINUTES,
                           -- OUTGOING TKGP,

```

**NB:** Wangiri is one of the tactic used in IRSF fraud.

## Steps:

- 1- Copy the number in the list from the latest hourly email alert. Check them in the above query
- 2- Copy and paste the result in the sheet "SPAM BNUMBERS" of the "SPAM\_CHECK" excel file.

- 3- Filter to select only High Destination rate numbers.
  - Check diversity for BNumber (many distinct local numbers are calling High destination).
  - Check for range on Bnumber. (if there is range being called no need for high diversity. This is automatically Wangiri)
- 4- For BNumber ranges pick the summary of calls from all numbers calling the range with the range followed by the % sign. If there is no range or numbers in the range being called are less than 3 or for, just take the Bnumber and the total of calls received. See example below:

NUMBER/RANGE	COUNT
32467422040	6
32467422044	7
32467422173	7
32467427082	6
212619035098	24
212619042295	19

NUMBER/RANGE	COUNT
32467422%	26
212619035098	24
212619042295	19

NB: Sometimes the ranges can be too large to be blocked if the total of calls from calling numbers and the amount of numbers detected in the range are low.

5- Send Email to Intl Team to block (in/out) calls for the High Rate Destination numbers or ranges
